An act to add Article 4.5 (commencing with Section 11774) to Chapter 1 of Part 2 of Division 10.5 of the Health and Safety Code, and to amend Section 10369.12 of the Insurance Code, relating to alcohol and drug abuse.

LEGISLATIVE COUNSEL’S DIGEST

AB 1461, as introduced, Krekorian. Alcohol and drug abuse.
(1) Existing law requires the State Department of Alcohol and Drug Programs to administer certain programs and studies related to alcohol and drug abuse recovery and to license, certify, and regulate alcoholism or drug abuse recovery or treatment facilities.

Existing law requires the department to develop and implement a statewide campaign designed to deter initial and continued use of methamphetamine in California, and authorizes the department to accept voluntary contributions, in case or in-kind, for purposes of this provision. Existing law authorizes the department to develop and implement a limited campaign to deter the abuse of methamphetamine for the 2006–07 fiscal year if the Director of Finance determines that at least $500,000 of private donations have been collected and deposited into a specified account.

This bill would require the department to initiate and conduct a 2-year pilot project to demonstrate the efficacy and cost effectiveness of a specified early methamphetamine intervention model in identifying and diverting methamphetamine addicts. The bill would require an
unspecified entity to collect and analyze data regarding the pilot project and provide a report as specified.
(2) Existing law authorizes a disability policy to provide that the insurer is not liable for any loss sustained or contracted in consequence of the insured’s being intoxicated or under the influence of any controlled substance unless administered on the advice of a physician.
This bill would exclude a health insurance policy from the application of the above-described provision.

The people of the State of California do enact as follows:

SECTION 1. The Legislature hereby finds and declares all of the following:
(a) The level of methamphetamine use in California constitutes a significant public health problem.
(b) The impact of methamphetamine use falls heavily on our health care system and emergency rooms are a common portal of entry for more severe cases.
(c) Fifty-six percent of hospitals nationwide say their costs have risen because of methamphetamine-related patient care, which is rarely covered by private insurance.
(d) Emergency rooms in Los Angeles, San Diego, and San Francisco reported a 43-percent increase between 1998 and 2002 in medical record mentions of methamphetamine.
(e) The U.C. Davis Medical Center has found that methamphetamine-involved patients using the emergency room are three times more likely to arrive by ambulance, two and a half times more likely to require hospitalization, and far less likely to be insured.
(f) Scripps Mercy Hospital in San Diego confirmed that a screening of trauma patients by a trauma center found that 59 percent were at risk for alcohol and other drug problems.
(g) It is well established that brief counseling about addiction treatment has a significant positive impact during and after periods of crisis.
(h) Emergency room interventions have the potential of engaging people in treatment before they enter the criminal justice system.
(i) Outreach contacts patterned after the public health model with infectious diseases keep people connected to the healthcare system while demonstrating a compassionate response to their suffering.

(j) However, emergency room physicians are often reluctant to order toxicology screens or to diagnose methamphetamine abuse because of legal implications for the patient, negative insurance implications for the hospital, a lack of training in substance abuse, and inadequate resources for referral and followup.

(k) California should pilot a methamphetamine early intervention model that provides adequate circumstances and tools in emergency rooms, is scalable, is cost effective, and may eventually be implemented on a statewide basis.

(l) The pilot project should be located in one rural and one urban county so that the impact of services can be evaluated on two different populations.

(m) A pilot program should ensure that emergency room physicians and pilot project personnel have adequate time, authority, and training to respond effectively to methamphetamine abusers in crisis.

(n) The confidentiality of test results is required to avoid the erection of barriers to healthcare for methamphetamine users.

(o) The pilot project should focus on ensuring the proper diagnosis and initiating the appropriate services in the emergency room so that patients will be encouraged to access care that they need.

SEC. 2. Article 4.5 (commencing with Section 11774) is added to Chapter 1 of Part 2 of Division 10.5 of the Health and Safety Code, to read:

Article 4.5. Methamphetamine Deterrence Pilot Program

11774. (a) The department shall initiate and conduct a two-year pilot project to demonstrate the efficacy and cost effectiveness of an early methamphetamine intervention model in identifying and diverting methamphetamine addicts into treatment before they enter the criminal justice system. In this model, either physicians and surgeons who specialize in the treatment of addiction or state-licensed substance abuse counselors, or both, shall assist emergency room physicians and surgeons in identifying patients
for toxicological screening and providing the early intervention.
In addition, outreach workers shall provide followup outreach to
those who receive this initial intervention.

(b) (1) The department shall receive applications from counties
that volunteer to participate in the pilot project, and shall select
two counties from these applications. One of the selected counties
shall have population of between 250,000 and 1,000,000 persons.
The other shall have a population of over 1,000,000 persons. To
ensure diversity in county size and to limit the cost of the pilot
project, the smaller county shall have at least one, but no more
than ____ hospital emergency rooms. The larger county shall have
at least ____ but no more than ____ hospital emergency rooms.

(2) If more than one county in each population category wishes
to participate in the pilot project, the department shall select the
participating counties based on a formula that includes the number
of annual arrests for methamphetamine sales and use per capita
and the number of persons per capita in treatment annually for
methamphetamine abuse.

11774.1. Within the first six months of the pilot project, the
department shall convene a working group of stakeholders,
including, but not limited to, physicians and surgeons who
specialize in addiction medicine, emergency room physicians and
surgeons, licensed substance abuse counselors, and public health
outreach workers. The working group shall refine program
parameters, after review of the Washington State Screening, Brief
Intervention, Referral, and Treatment Program which was funded
through the federal Center for Substance Abuse Treatment.

11774.2. Between the first six months and the first 18 months
of the pilot project, the ____ shall collect data regarding the
operation of the pilot project. The data shall include the number
of patients who test positive for methamphetamine or other drugs,
the type of intervention given, results of that intervention after six
months, program cost per patient, and, to the extent possible, the
medical cost savings per patient. The data shall also indicate the
levels of emergency room staff, patient, and health insurer
satisfaction with the pilot project. The ____ shall then analyze the
data and prepare a report to be provided to the health committees
of the Senate and Assembly by March 31 of the second year
following the year that the pilot project is initiated.
11774.3. In conjunction with other pilot project stakeholders, the department shall seek funds from the federal government and private foundations to fund the pilot project.

SEC. 3. Section 10369.12 of the Insurance Code is amended to read:

10369.12. (a) A disability policy may contain a provision in the form set forth herein.

Intoxicants and controlled substances: The insurer shall not be liable for any loss sustained or contracted in consequence of the insured’s being intoxicated or under the influence of any controlled substance unless administered on the advice of a physician.

(b) Subdivision (a) shall not apply to a health insurance policy.
